# SNOMED CT<sup>®</sup> UK Drug Extension

## General Overview of UK Drug Extension Reference Sets

# Document management

## Revision History

Version	Date	Summary of Changes
6.0	26-Mar-2013	Changes from 'Core' release to 'International' release Rebranded as HSCIC
6.1	10-Oct-2013	Correction of status for UK Language subset
7.0	28-May-2014	Update to include RF2 release
8.0	17-Sep-2014	Contact details updated
9.0	07-Jan-2015	Removal of the Administrative changes section. Update of contact details
10.0	27-May-2015	Revised document format. Inclusion of new subsets
11.0	06-Jan-2016	Inclusion of new subsets
12.0	22-Jun-2016	Inclusion of new subsets
13.0	05-Aug-2016	Inclusion of new subset and name change for QOF nicotine replacement subset. Update to new corporate document format
14.0	01-Feb-2017	Inclusion of new Enhanced Services subsets
15.0	01-Apr-2018	Change UKTC to UK NRC (UK National Release Centre)
16.0	16-May-2018	Inclusion of new refsets
17.0	11-Jul-2018	Inclusion of new refsets and removal of Seasonal Flu vaccines subset
18.0	08-Aug-2018	Inclusion of new refset
19.0	01-Oct-2018	Removal of Great Britain English language subsets
20.0	31-Oct-2018	Inclusion of new refset
20.1	20-Feb-2019	Inclusion of new refsets
20.2	20-Mar-2019	Inclusion of new refsets
20.3	15-May-2019	Inclusion of new refset
20.4	04-Sep-2019	Inclusion of new dm+d Association refset
20.4	02-Oct-2019	Inclusion of new refsets
20.5	30-Oct-2019	Inclusion of new refset
20.7	19-Feb-2020	Inclusion of new refsets
20.8	15-Apr-2020	Inclusion of new COVID-19 refsets
20.9	13-May-2020	Inclusion of new refsets, title renamed from Subset to Reference Set
20.10	10-Jun-2020	Inclusion of new COVID-19 NSAID refset
20.11	28-Oct-2020	Inclusion of new ES HPV Refset
20.12	17-Feb-2021	Inclusion of new refsets
21.00		Removal of subset IDs. Addition of Refset IDs. Update to refset name.
21.1	14-Apr-2021	Inclusion of new ES Direct oral anticoagulants refset
21.2	12-May-2021	Change of official address

## Reviewers

This document must be reviewed by the following people:

Reviewer name	Title / Responsibility	Date	Version
Chris Morris	Technical Services Workstream Lead - Operations and Infrastructure	06-May-2015	10.0

## Approved by

This document must be approved by the following people:

Name	Signature	Title	Date	Version
Stuart Abbott	SABBOTT	Principal Terminology Specialist		

## Glossary of Terms

Term / Abbreviation	What it stands for
dm+d	NHS Dictionary of Medicines and Devices
IHTSDO	International Health Terminology Standards Development Organization
NHSBSA	National Health Service Business Services Authority
RF2	Release Format 2 (RF2) is the format used for the publication of SNOMED CT data.

## Purpose of this Document

This document provides information relating to the reference sets provided within the SNOMED CT<sup>1</sup> UK Drug Extension. Further information on SNOMED CT and reference sets can be found at: <https://digital.nhs.uk/snomed-ct>

For a full description on the use, technical structure and implementation of SNOMED CT and reference sets, please refer to the SNOMED International Starter Guide and the SNOMED International Technical Implementation Guide (TIG) provided within the Document Library on the SNOMED International website (<https://confluence.ihtsdotools.org/display/DOC>).

## Terms and conditions

The following conditions apply to your use of content, files and information assets (“Content”) accessible through the TRUD website

[<https://isd.digital.nhs.uk/trud3/user/guest/group/0/home>]. These conditions form a part of the website terms and conditions and any additional licensing terms specified on this website as applicable to the Content. No part of the Content:

- i) constitutes a medical device;
- ii) has an intended medical purpose; nor
- iii) is intended to be an accessory to a medical device;

as per Regulation (EU) 2017/745 of the European Parliament and Council on medical devices. Other than where liability cannot be excluded as a matter of law NHS Digital is not liable for any damages, costs, liabilities or expenses (whether the same are direct or indirect) suffered by you, or any third party to whom you may make Content available, arising out of, or in connection to, use or intended use of the Content (including, but not limited to, any purported reliance on the Content being a medical device, having a medical purpose or being an accessory to a medical device).

## Introduction

This document is provided for those who may wish to use the SNOMED CT reference sets provided within the release files of the UK Drug Extension in Release Format 2 (RF2). Reference sets provided in RF2 are also referred to as *refsets* (see Section 3.2.1 the TIG for further information). This document uses the term ‘refsets’ throughout. Some refsets are also subsets of SNOMED CT components. The term subset was widely used with SNOMED CT Release Format 1 but is less commonly used in RF2.

You can find definitions for [reference set](#) and [subset](#) in the [SNOMED Glossary](#).

SNOMED CT refsets have a range of purposes and vary in size from a single member to ones with over 100,000 members. The common use of refsets in systems include:

- To simplify the user interface
- To improve data quality

---

<sup>1</sup> SNOMED® and SNOMED CT® are registered trademarks of the International Health Terminology Standards Development Organisation (IHTSDO®) ([www.snomed.org](http://www.snomed.org)). SNOMED CT® was originally created by the College of American Pathologists.

- To maintain consistency between different implementations
- To enable interoperability between different clinical systems
- To support statutory reporting requirements

A brief description of the UK refsets included in the SNOMED CT UK Drug Extension can now be found within the on-line [Data Dictionary for Care](#); information on international refsets can be found with the international release.

Refsets are a derivative of the SNOMED CT UK Drug Extension and should be used in conjunction with the SNOMED CT UK Edition files. Except where otherwise specified, all refsets are of national use rather than local use and of potential relevance to all health professions, system suppliers, record, and messaging designers.

## Scope

The scope of this document is the SNOMED CT UK refsets (RF2) released in the UK Drug extension.

## Release Formats

Prior to 2018 SNOMED CT data was previously released in 2 formats: Release Format 1 (RF1) and Release Format 2 (RF2). The 1 April 2018 UK Edition was the final publication of the data in RF1 format.

From 18 April 2018 the SNOMED CT UK Drug Extension is only fully supported in RF2 format.

In most cases each of the concept subsets within the RF1 release have been provided as a simple reference set in the RF2 release, and each description subset in RF1 has an equivalent language reference set in RF2. This is the delivery mechanism RF2 uses for such artefacts. RF2 has an inbuilt mechanism for managing the history of such a subset at a given point within its file structure and data. Please refer to the SNOMED International [SNOMED CT Starter Guide](#) and the SNOMED International [SNOMED CT Technical Implementation Guide](#) to aid your understanding of the structure and content of SNOMED CT and of the specific detail relating to reference sets.

The refset files are additional to the core tables included in the release and are provided in the Refset folder in RF2. Refsets of the same type in a folder are provided in a single file within that folder for ease of implementation.

## Management, Quality Assurance and Validation

Refsets are dynamic (based on a query specification) and can vary from release to release, (based on a specific hand-picked set of concepts). Future releases of refsets are subject to iterative refinement both because of end-user feedback and upon review at each subsequent SNOMED CT release in relation to the original specification. Refsets may need to change in both the size and scope of the files if underpinning policy is revised or underlying SNOMED CT content changes.

Named refset owners are responsible for the quality assurance and maintenance of their refset and for managing changes to the refset which may result from the content changes in the bi-annual release or dm+d data.

Where refsets have no current owner or specific use case defined, they are only maintained using a technical process for SNOMED CT content updates; there is no clinical effort applied over and above re-running the refset specification and reconciling any retirements to their replacements.

Information on individual refsets including ownership, purpose, scope, and status are now made available online at the [Data Dictionary for Care](#) rather than in this document.

## General Information in relation to refsets

### NHS Realm Language Reference set

Some domains of use require language refsets to identify their preferred descriptions for use with the concepts identified by the refset. Wherever possible, descriptions are harmonised with the NHS Realm Language refset, but where this is not possible a language refset enables the required synonym for a particular domain to be identified. As a general rule the specialist professional bodies for a given domain of use will guide the content of the NHS Realm Language reference set and thus individual language refsets will only be developed where a particular professional body identifies specific descriptions different to those in the NHS Realm Language Reference set.

In an implementation using the RF2 files, the NHS Realm Language reference set should be used to provide the UK Fully Specified Name, Preferred Term and Synonyms.

### Requests for Change

Unless stated otherwise (for example where requests go through the owner of the refset), requests for changes to SNOMED CT UK Drug Extension refsets will be handled via requests sent to the [Information Standards helpdesk](#) with the subject line 'SNOMED CT UK Drug Extension Refset Request'.

### Historical refsets

Over time refsets may be withdrawn or deprecated for a number of reasons. This information will now be provided within the Data Dictionary for Care as part of the information held on the refset. Refsets which are no longer released will be shown with the status of "Deprecated". In RF2 the details will be available in the release of type 'Full' if the refset metadata concept remains active, but all members of the refset will be inactive. When the refset metadata concept is made Inactive the membership of the refset will not be published in any of the data release formats (Delta, Snapshot and Full) leaving no history of the refset membership.
